

# The Second European Safety Management Symposium

## SMS - Safety Performance through People

**The Cultural Approach to delivering a dynamic and productive SMS into the heart of your business**

**28 & 29 September 2010 • RAF Museum London UK**

**Safety Management is a key priority in today's global aviation industry - yet there is still no common view of what an effective Safety Management System should be and how to achieve it.**

Hosted by Baines Simmons and the UK Flight Safety Committee, the Second European Safety Management Symposium provides a clear picture and practical strategies for SMS - what it is, how to make it happen and how to see a real, cost-effective return on investment in your business.

The 2010 Symposium focuses on how to enable and engage the people in your organisation to make a maximum contribution to integrating and facilitating your SMS. It provides the latest thinking and a practical approach to Just Culture and includes the inaugural FAiR® workshop.

### **A Practical Approach**

Have you read all the regulations and books and want:

- ▶ a clear view of what good looks like?
- ▶ to know how to make SMS work for your business?
- ▶ to benchmark your organisation's SMS status?
- ▶ an opportunity to meet and network with others looking for the same answers?
- ▶ an approach to Safety Management that you can understand, do and communicate?
- ▶ to deliver a practical Just Culture to your organisation?

If you feel confident that all the components are largely in place in your organisation, but still seem to be missing the vital links to bring everything together, this Symposium will explain what you need to do for an integrated approach to make SMS work for your business.

### **The First FAiR® Users' Workshop**

The event includes a free opportunity to discover how the market-leading FAiR® System diagnostic tool can be pivotal to the success of your organisation's Just Culture policy.

Attendance is of value to all safety, risk and quality management professionals working in Initial Airworthiness, Continuing Airworthiness, Maintenance, Flight Operations and Air Traffic Management within Civil, Military and Regulatory organisations.
